

CHARACTER-BASED CODING 101

COMMUNITY PLANNING WORKSHOP

PRESENTATION:

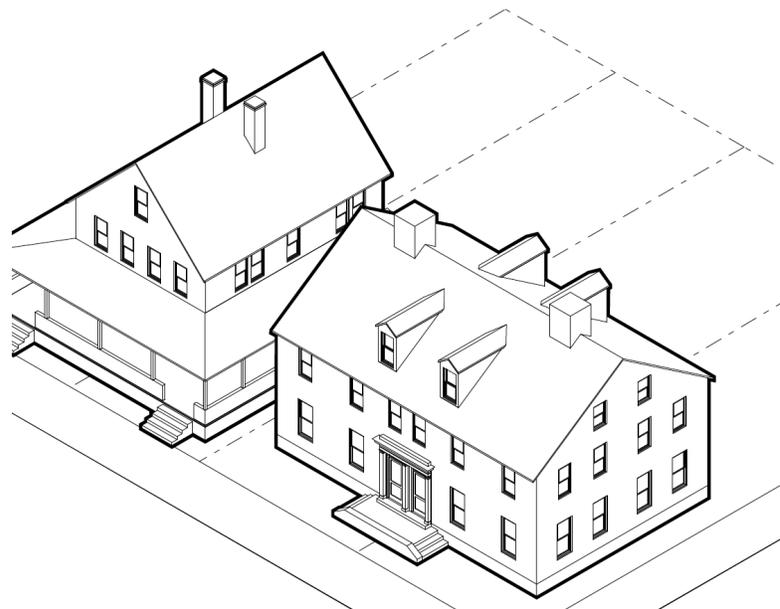

Monday, January 9, 2017

6:30 - 8:00 pm @ Topsham Public Library

Community residents, citizen volunteers, elected leaders, business owners, and interested stakeholders are invited to participate in a Character-based Code 101-level workshop, sponsored by Topsham Development, Inc.

Character-based codes are being effectively used in communities of varying scales across New England. Join us for a presentation on January 9th to learn how character-based coding can preserve historic towns and villages, and stimulate the transformation of auto-centered corridors into economically-vibrant, walkable places. The workshop begins with an eye-catching presentation of the nuts and bolts of character-based coding, including case studies and experiences from other Maine and New England communities. Participants will gain practical skills to more closely discern what makes the different neighborhoods and commercial centers in Topsham unique, and an understanding of how Comprehensive Plan efforts can set the stage for new zoning to implement community visions.

The workshop features Maine's leading experts in Character-Based Coding, Vanessa Farr of Maine Design Workshop and Kara Wilbur of Principle. More information about Maine Design Workshop can be found at www.mainedesignworkshop.com.

Sponsored by Topsham Development, Inc.
