## Our Mission

*The mission of the Riverwalk Advisory Committee is to bring together the Topsham and Brunswick communities to design, support and create a 1.25 mile dedicated in-town walking loop. The plan envisions a safe, fully-accessible route along the Androscooggin River that encompasses and enhances the Swinging Bridge and the Main(e) Street bridge for the purpose of connecting the two towns through education, recreation, transportation and promotion of healthy lifestyles.*

## The Project

The 1.25 mile Riverwalk will be paved to ensure that it is fully-accessible in all seasons. As necessary, existing sidewalks will be extended or improved. Benches will be installed along the route, particularly at sites that provide spectacular views of the Androscooggin River and of both communities. There will be directional signage along the route and informational signage at points of natural, historic or other significance. New safety buffers will protect pedestrians and cyclists from vehicles in the more urban, high-traffic sections of the Riverwalk. The Riverwalk will be an important link in the series of interconnected trails extending from the proposed Bridge-to-Bridge trail in Topsham Heights, through downtown Brunswick, to the Androscooggin Pedestrian and Bicycle Path out to Cook's Corner.
